

Aim

We, build Authentication Provider in Spring Security.

Objective

You have been assigned a task by the team to add more flexibility rather than using the standard scenario in building Spring Security.

Github

Pushing the code to your GitHub repositories

- Open your command prompt and navigate to the folder where you have created your files. `cd Users\DELL\OneDrive - Lovely Professional University\Desktop\Project`
- Initialize your repository using the following command: `git init`
- Add all the files to your git repository using the following command: `git add .`
- Commit the changes using the following command: `git commit . -m "Changes have been committed."`
- Push the files to the folder you initially created using the following command: `git push -u origin m`
